DIALECTICAL METHOD OF COGNITION ROLE IN THE DEVELOPMENT OF THE THEORY OF INSURANCE SYSTEM

Liudmyla O. POZDNIAKOVA

*candidate of economic sciences, associate professor,
associate professor of University of government fiscal service of Ukraine*

The paper studies the essence of the dialectical method of scientific knowledge and its role in the formation of the modern theory of the insurance system. Using the basic laws of dialectics led to the conclusion that the modern theory of the

development of the insurance system is the transition from the inertia of self-organization to development through the formation of a new type of growth, which is based on the socio-economic efficiency.

Key words: *the dialectical method, the laws of dialectics, the insurance, the insurance system.*

Domestic insurance system in modern conditions the European vector of Ukraine needs drastic reform. However, reform and effective development of the insurance system is impossible without the development of the modern theory that is based on scientific research methods, in-depth study of theoretical and methodological and organizational and economic principles.

Despite the significant number of scientific publications that focus on the methodology of insurance knowledge, the modern theory of transformation of the insurance system remains little explored. A fundamental role in the formation and development of the theory of dialectical insurance system plays a medical study. The purpose of the article is a study of the role of the dialectical method of cognition in the development of the theory of the insurance system.

Dialectical research method allows the study of insurance and insurance system in all its versatility from the standpoint of development, the transition from anachronistic, obsolete to a new, modern. Also identify the category of «insurance system» and its implication of the term «insurance» from the

perspective of their self-development and transition to a higher level. The laws of dialectics - the law of unity and struggle of opposites; law transition from quantitative change to qualitative and vice versa; law denial - denial of permit to explore the transformation of the nature and content of categorical definitions, structures and hidden mechanisms of the insurance system.

The use of the dialectical method of scientific knowledge allowed the conclusion that at present there is not only a radical change pre-established theory of the insurance system, but there is a need in the formation of its newest variation through systemic development of new theoretical propositions. Based on the dialectical method of knowledge is understanding the fundamental laws of development and transformation theory of insurance and insurance system as a separate financial direction of science and economic phenomenon. Working insurance system theory in the light of the laws of dialectics has proven that the current insurance system development is a transition from self to inertial flexible and continuous updating and improvement.
